

QUARTZ STONE SURFACES
Inspired in nature, perfected by technology

QSTONE[®]
EVOLUTION IN STONE

Composed of approximately 94% natural quartz and 6% advanced resin, QSTONE® engineered stone is an extremely durable, hardwearing surface. It is resistant to scratches, impact, cracking and corrosive materials. It also has high mechanical resistance and dimension stability.

QSTONE® is also extremely stain resistant and will resist staining from most household products including fruit juice, coffee, tea, wine, waterbased markers, liquid food dyes, nailpolish and nailpolish remover. QSTONE's low absorption rate means it is a hygienic surface suitable for use in food preparation areas and it is both waterproof and frost resistant.

QSTONE® engineered stone is suitable for use on both horizontal and vertical surfaces so the limit is only your imagination.

endless applications

- Benchtops
- Splashbacks
- Flooring
- Wall cladding
- Shopfitting
- Furniture

care & maintenance

All QSTONE® products are easily maintained by using specially formulated stone cleaners designed to protect and maintain the appearance. General cleaning can also be undertaken by using warm water with a mild detergent or similar. For best results, we recommend non-abrasive short weave clothes. For further details, please read the QSTONE Fabrication Manual.

* The sample provided for your colour selection may vary to the final product supplied due to characteristics inherent in natural quartz stone. Slight variations in colour and shade on different batches might occur at times and are considered a normal characteristic of the surface.
